

New Pathlighting **Solutions** From **Nightscaping®**

Scout GD-1504CU

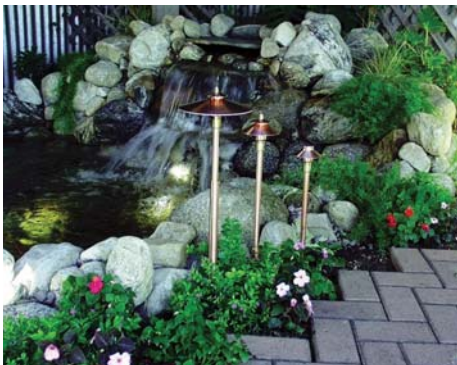

The Nightscaping® Scout is more than just a good looking, copper and brass pathlight. It's an innovative fixture that allows you to either concentrate light in tight circles or larger spreads based on the needs of your individual projects. Use it to provide effective walkway lighting or for accenting planters and hardscape borders.

Mini Scout GD-1503CU

The Mini Scout, like its larger predecessor, allows you precise control over the light pattern produced. The compact design makes the Mini Scout an unimposing, yet highly functional pathlight that will add beauty and visual interest to any landscape, day or night.

Scott Liter GD-1507CU

The Scott Liter takes Nightscaping's® innovative design one step further. It enables you to both fine tune the light pattern produced and adjust the fixture's height to meet your exact specifications. The Scott Liter's combination of style, function, and versatility make this the perfect pathlight for a changing and growing landscape.
